

Paper-Less helps you to navigate the challenges of COVID-19

To assist our customers in keeping their employees safe, ISE & Paper-Less offer the following suggestions to help reduce the amount of employee interaction with shop floor terminals.

- If using touch screens on the shop floor, provide each employee with a stylus to interact with MES
- Deploy proximity readers on the shop floor
 - Proximity readers can ship with pre-configured cards – each card with a unique ID. By enabling the Alternate ID functionality within MES you can efficiently configure and deploy proximity readers.
 - Especially helpful if utilizing the Paper-Less Time and Attendance feature
- Replace shop floor terminals using a mouse and keyboard with tablets
 - Not only do tablets support stylus input devices, but they are easier to wipe down and keep clean
- Configure work crews in MES and use the crew functionality for shop floor reporting
 - Assign “crew leads” responsible for generating shop floor transactions rather than individual users
- Enable the auto clock-in feature to automatically generate a T/A transaction when a user starts labor
 - Eliminates the need for users to T/A IN, however the T/A transaction would need to be adjusted as it would match the time labor was started

*Want to discuss a more automated approach to match your manufacturing environment? We are here to help. Contact us at **262.567.9240** or find out more at www.ise-erp.com/products/paper-less.*

Leveraging over 35 years in the business technology industry focused on discrete manufacturing, we know how to provide an accurate representation on whether our core competencies can meet your business needs.
