

Transforming Traditional Manufacturing Operations by Providing Digital Intelligence & Communications

TUESDAY

Achieving On Time Delivery with Paper-Less MES

Do you use multiple disconnected/manual tools to track execution across your shop floor? Paper-Less closes the loop to provide accurate data related to production times, statuses and efficiency for Production and Inventory ultimately giving customers the tools to improve On Time Delivery.

IBM Navigator for i

IBM dropped support for IBM i Access for Windows in April 2019. In this session you will see how IBM has taken most of the capabilities of that older product and incorporated them into IBM Navigator for i; IBM's best supported and completely browser based interface for IBM i systems management. And you will see some new functions that are only available in IBM Navigator for i.

Next Generation XA Functionality

Discussion of System i Workspace (SiW) and how you as a user can benefit from it.

WEDNESDAY

Closing the Loop on Costing with Paper-Less MES

Explore a critical factor for any manufacturer: Determining the price of their end product. See how Paper-Less MES (Manufacturing Execution System) can help set an accurate cost and more importantly help reduce your manufacturing cost in conjunction with Infor XA.

XA Financials

Overview of the modern XA Financial suite. Enterprise Financials including Accounts Receivable, Accounts Payable, Cash, and General Ledger.

Working with Homepages

Infor Homepages is the single entry point to your application suite, driven by the Infor OS platform. Role-based Homepages serve as configurable dashboards, providing at-a-glance insights to daily work processes. Session includes an overview, the basics & administration. Come see what all the excitement is about!

THURSDAY

Workspaces (in Power-Link)

The in's and out's of how you can customize preferences and defaults using a workspace.

IBM i Access Client Solutions (ACS)

IBM's newest, supported client platform for access to IBM i (and IBM's replacement for IBM i Access for Windows, which is no longer supported as of April 2019). ACS is a platform independent solution that offers most of the prior version's function, but with many new capabilities as well. We will cover a lot of ground in this session, but with special focus on the ACS Data Transfer function.
